

## Establish network

Process the data and establish the network by computing the strength of interlinkage

## Strategy 1: centrality

Calculate three kinds of centrality and the weighted sum of three centrality

## Strategy 2: influence

Employ second-order network to further quantify the influence of indicators

## Strategy 3: consistency

Quantify the urgency of the goals and give priority to the goal in line with the development strategy

**MSE**

## Results and evaluation

Compare calculated results with local strategies to prove the effectiveness of model

## Extension of model

Extend our model to other fields from the view of centrality, influence and consistency
